## Get Certified with the LPI Linux Certification

Our programs have gained the worldwide respect of people looking for Linux jobs and companies looking to hire skilled Linux administrators. To date, LPI has delivered exams in all corners of the globe.

### The buzz about us...

"...When I first wanted to certify my Linux skills I chose LPIC because of its vendor-neutrality. I felt that the Exam Objectives were very well thought out and the exams were very challenging in a practical sense..."

--**Rahim Virani**, *Canada, Dipl. CSP, LPIC-1, LPIC-2, Comptia A+*

"... Working in a crowded IT market, I needed a tool to differentiate myself and make me more reliable to our customers who customarily required certifications in other operating systems. In addition, every time it became more difficult (for them) to find professionals with good Linux knowledge..."

--**Pablo Pessagno**, *Argentina, LPIC-1*

"Linux users are known to be very committed, going beyond just a job. And those who participate in community projects additionally gain valuable soft skills and management experience. My own contributions led me through the stages LPI alumni and LPI staff member to a seat in LPI's Board of Directors. Working in the LPI team and communicating with interested parties is much fun, and I definitely grew with the tasks. Actually, my hobbyhorse silently became a second career path. So, voluntary work like this can be very rewarding. I'm sure personnel managers will appreciate it, too."

-- **Torsten Scheck**, *Germany, Software Engineer, LPIC-1*

"I'm a software developer who has spent the majority of his career writing programs for Windows systems. I gained my LPI Level 1 certification through self-study, and found that working through the syllabus was a superb way for me to really get to know the nuts and bolts of GNU/Linux. I would recommend the LPI certification to any developer who wants get up to speed quickly on GNU/Linux systems."

--**Dafydd Walters**, *United Kingdom, Sun Certified Java Developer and Microsoft Certified Solution Developer*

"...LPI not only raised the bar with regards to vendor-neutral certification, but even against IT vendor programs. Holding over two dozen certifications on a variety of platforms, nothing makes me cringe more hearing some equate the Linux+ to the LPI Certified Level 1 (LPIC-1), or a certification article that focus on vendor branding. Make no mistake, the LPI levels are advanced Linux certifications, period. LPI offers the best of all worlds: extensive community input, traditional psychometrics and an international focus. The fact that is also vendor neutral is just an uncommon bonus."

--**Bryan J. Smith**, *USA, Linux+, LPIC-2, RHCE*
